LOAD INDICATOR SYSTEMS

The **LiteWay Load Indicator System** is designed to use the air pressure from an air ride suspension. The pressure is measured by a series of lights that can indicate different set points on your air gauge or scale and are fully adjustable to indicate desired levels for an individual application. High-visibility lights mounted on the outside of the truck and trailers, allows the loading operators to quickly monitor the loading process from a safe and convenient location – even in low light or inclement weather.
